OKAFOR ONYEKACHUKWU DAVID

Computer Science Student | Software Developer | Mobile App Developer | Product/Frontend Developer
Phone: 08139765284 | Email: okaforo253@gmail.com

Portfolio | GitHub | LinkedIn

PROFESSIONAL SUMMARY

Computer Science student and software developer with approximately two years of practical development experience across web, mobile, and full-stack projects. Comfortable with HTML, CSS, JavaScript, TypeScript, React, Next.js, Angular, WordPress, modern frontend frameworks, APIs, and API integration. Experienced in moving projects from requirements and interface design through development, testing, refinement, and deployment, with additional exposure to product design and AI-assisted development workflows. Strong in project structuring, debugging, iterative problem-solving, and translating practical requirements into usable software.

EDUCATION

2023 - 2027
UNIVERSITY OF PORT HARCOURT
B.Sc. Computer Science (In Progress)

2018 - 2023
Madonna Catholic College
Senior Secondary School Certificate

PROFESSIONAL EXPERIENCE

2026
Bincom Development Center
Mobile App Developer Intern

- Developed mobile applications using Apache Cordova and gained practical experience with React and Angular in software-development projects.
- Participated in collaborative development activities, applying modern frontend technologies and structured development workflows.
- Facilitated classes and practical sessions for mobile app development trainees, explaining technical concepts and supporting hands-on activities.
- Contributed to AutoJob Serve, an AI-powered employment platform intended to streamline job-search and application workflows and help recruiters connect with suitable candidates.

SELECTED PROJECTS

Smart Leads Dashboard | *React, TypeScript, Vite, Tailwind CSS, Node.js, Express, MongoDB, Mongoose, JWT, bcryptjs, Docker*

- Built a full-stack CRM-style lead management system with a React/TypeScript frontend using custom hooks/Axios and a Node.js, Express, MongoDB, and Mongoose backend.
- Implemented lead lifecycle management with New, Contacted, Qualified, and Lost statuses, plus real-time search and filtering by status, source, and sort order.
- Created analytics views, CSV export, responsive mobile-first layouts, Tailwind dark mode, toast notifications, and immediate interface feedback for core user actions.
- Added JWT authentication, Admin/Sales role-based access, bcrypt password hashing, Helmet security headers, Morgan logging, and a Dockerized development/deployment environment.

AutoJob Serve | *AI-powered employment platform*

- Contributed to development during the Bincom internship on a platform designed to help job seekers streamline search and application workflows and help recruiters identify suitable candidates.
- Gained practical experience working on an AI-related product where automation supports parts of the application routine without replacing core development judgment.

SELECTED PROJECTS - CONTINUED

Madonna Catholic College School Portal | *Next.js, React, TypeScript, Tailwind CSS*

- Designed and substantially completed the frontend using reusable React/Next.js components, TypeScript, responsive layouts, and a polished wine-and-white visual system.
- Structured the application for future backend integration, with clear component organization and a frontend architecture intended to support continued development.
- Communicated directly with school stakeholders about continuation of the project; the backend stage was planned but was not completed or deployed.

MCC Reunion Portal | *Web portal for Madonna Catholic College reunion/event*

- Created a real-event portal that organized event information, registration flow, ticket/payment journey, payment confirmation/receipt workflow, and user-facing event requirements.
- Applied practical product and stakeholder thinking to structure a usable digital experience, while limiting claims to functionality actually developed.

Personal Developer Portfolio | *Next.js, TypeScript, React, Tailwind CSS*

- Built a modern dark Bento-style portfolio with responsive layouts, structured navigation, project and technology showcases, credentials/about content, social links, contact section, and strong personal branding.
- Demonstrates component-based frontend architecture, visual hierarchy, UI implementation, responsive design, and product/interface design thinking.

Reach App Landing Page | *Next.js, TypeScript, React*

- Built a responsive landing page using component-based Next.js/React development, TypeScript, and modern application structuring practices.

Array Calculator | *HTML, CSS, JavaScript*

- Developed an interactive web application for array calculations, applying JavaScript arrays, loops, functions, operators, data manipulation, user input handling, DOM interaction, and dynamic result rendering.

TECHNICAL SKILLS

Languages	HTML, CSS, JavaScript, TypeScript, Java, Python
Frontend	React, Next.js, Angular, Tailwind CSS, Vite, Responsive Web Design, Component-Based Development, WordPress
Backend & Data	Node.js, Express.js, REST APIs, API Integration, MongoDB, Mongoose, MySQL, Supabase
Mobile, Tools & Security	Apache Cordova, Git, GitHub, Docker, Figma, JWT, bcrypt, Role-Based Access Control, Secure API Practices, Graphic Design
Workflow	Debugging, Testing, Deployment, CI/CD, Project Structuring, Requirements Analysis, UI/UX Implementation

AI-ASSISTED DEVELOPMENT

Effective use of AI tools for coding assistance, debugging, research, prototyping, problem-solving, documentation, and accelerating development workflows, while reviewing and understanding implementation decisions rather than relying blindly on generated code.

PROJECT MANAGEMENT / PROFESSIONAL SKILLS

Project planning and feature breakdown | Requirements analysis | Product thinking | Iterative development | Stakeholder/client communication | Technical communication and facilitation | Team collaboration | Managing development workflows | Learning and adapting to new technologies
